GitHub LinkedIn Portfolio

Summary

Final-year CSE student who designs and deploys full-stack and mobile applications using React, Next.js, FastAPI, Flutter, and Kotlin, with AI-assisted development. Designed backend solutions including multi-model API failover with Redis caching, role-based access with Supabase RLS, and Dijkstra-based routing. Seeking an SDE internship to strengthen core skills in data structures, algorithms, and backend design.

Education Qualification

Bachelor of Engineering in Computer Science and Engineering **[2023-2027]**
Rao Bahadur Y Mahabaleshwarappa Engineering College, Ballari – 583104 | VTU, Belgaum **CGPA: 7.8**

Technical Skills

Languages	: Python, JavaScript, Kotlin, Dart, SQL
Frameworks & Libraries	: ReactJS, NextJS, Tailwind CSS, Flutter, Jetpack Compose, Fast API, scikit-learn, pandas
Backend & Databases	: Firebase, Supabase, MySQL
Tools	: Git/GitHub Actions, VS Code, Android Studio, Vercel
Concepts	: RESTful APIs, OOP, DSA, Machine Learning basics, Generative AI basics

Project Profile

- **HemoLynk – AI Driven Blood Inventory System with Risk Redistribution Engine** **[GITHUB]**
  Tech Stack: Flutter (Dart), Python, Fast API, Firebase, Random Forest, Dijkstra, Greedy Scoring
  Built a cross-platform app with role-based access for admins, donors, and employees to track inventory across 54 facilities in 6 districts, using synthetic data (1000+ records, 1000 donors). Implemented Random Forest for inventory prediction, greedy scoring for risk analysis and donor eligibility, and Dijkstra's algorithm for facility routing. Tested with 9 accounts (3 per role).
- **KnowledgeDrop - Secure File Sharing Portal for College** **[GITHUB]**
  Tech Stack: ReactJS, Supabase
  Built a file sharing platform with OTP-based login, file upload across 2 storage buckets, a 6-table database, and role-based access for admins, teachers, and students. Tested with 3 accounts, one per role.
- **AniPet – AI Powered Petcare Guide Web App** **[GITHUB]**
  Tech Stack: Next.js, React, JavaScript, Tailwind CSS, Gemini API, Groq API, Upstash Redis, Vercel, Github Actions
  Built a live, no signup webapp with AI generated, schema validated care profiles (9 sections each) for 20 breeds across 4 animals. Designed a 4-model AI failover chain with per model cooldowns, plus a 2-layer cache (Local storage and Redis). **[LIVE LINK]**

Experience

Android App Development Intern, CodSoft | (Jul 2026 – Aug 2026)
Built three Android apps in Kotlin: Quote of the Day app (quotes loaded from a local JSON file), Quiz app with multiple categories, difficulty levels, final scoring, and a saved attempts history, and To-Do List app.
Practiced UI design, app structure, and debugging in Android Studio while working independently to deadlines.

Certifications and Achievements

- Brain and Bytes 24-Hour Hackathon (Internal) - Team lead, Pet Health and Care web app using Gemini API | Sept 2025
- Introduction to Frontend Development and Programming with JavaScript by Meta – Coursera | August 2025
- Deloitte Australia Technology Job Simulation and Commonwealth Bank Software Engineering Job Simulation – Forage | July 2026
